HALLMARK FLOORS

# EDUCATION

A truly effective learning environment should be comfortable, inviting and inspiring for both students and educators. From K-12 buildings to higher education institutions, school budgets offer little to no flexibility, and maintenance costs factor highly in choosing flooring and other interior pieces. Hallmark's rigid core resilient floors optimize any learning environment and are cost effective.

An important detail to consider when choosing commercial resilient floors for educational settings is the construction of the subfloor. Resilient floors are designed to go over wood or concrete sub floors. Floating floors are best for second stories or first floors with suspended wood. Glue direct floors are more stable and are suitable for all levels, including light-weight concrete.

The best use for Hallmark commercial resilient floors is in interior hallways, lobbies, and classrooms. Turn to our Courtier, Voyager, Times Square, 3Twenty & 2Twelve collections for a variety of wood visuals, textures and concrete designs, all of which can be recoated to extend the life of the floor, and reduce maintenance, life cycle cost and liability.
